

Lab Assignment 1: Pandas vs. Polars

Submission Instructions

This is a GROUP assignment. Each group has 5 to 6 members and makes ONE submission.

Dates

Opens: Thursday 8 October, 12:00 PM. The notebook is in the course repository and the submission opens at the same time.

Closes: Friday 9 October, 12:00 AM.

What the assignment is about

Pandas is not the only library for working with data in Python. Your group will find out how it compares with another library, on a dataset you choose, and report what you measured.

Before you start

- Make sure all group members joined in a group in Blackboard.
- Choose one member to create the group's GitHub repository. **Add every other member as a collaborator.**
- Every member should have the course environment ready: (.venv) active.

What to do

1. Fork the course repository.
2. Pull the assignment notebook from the course repository (git pull origin main).
3. Choose ONE public dataset for the group: a CSV file with at least 100,000 rows, at least one text/category column, and at least two numeric columns.
4. Complete the assignment notebook (The notebook will be in the course repository on Thursday 12:00PM)

5. Restart the kernel and run the notebook from top to bottom, so the results are saved in the file.
6. Push the completed notebook to the group's GitHub repository.

What to submit

One Word document per group, using the submission template in this folder

It must contain, in this order:

1. The names, student IDs, and section of ALL group members
2. A screenshot of your terminal when you pulled the assignment
3. Your dataset link
4. Your GitHub repository link
5. A screenshot of your terminal when you pushed your work

Screenshot rules

- Both screenshots must show your full screen and clearly show you actual terminal: the command you typed and the output it produced.
- Screenshots of the GitHub website are NOT accepted.

Repository rules

- The link must open without a login. Make the repository public.
- If your dataset is larger than about 50 MB, do not commit it. Add it to .gitignore and put the download link in your Word document.

Note: I will only grade the last attempts.

Wishing you all the best
